# Vysvetlivky k importu CSV súboru

## Popis a zloženie CSV súboru

Výkaz je možné importovať jedným súborom, ktorého názov je zložený zo skratky výkazu uvedenej v špecifikácii a prípony **.csv** (ďalej len "CSV súbor").

## Základné charakteristiky CSV súboru

**Encoding** - kódovanie CSV súboru je UTF-8

**QuoteChar** - jednotlivé hodnoty v CSV súbore sú ohraničené v úvodzovkách (napr. "ico" "rok" "datum")

**SeparatorChar** - jednotlivé hodnoty na riadku sú od seba oddelené čiarkami (napr. "25", "48", "712")

**EscapeChar** - ak hodnota obsahuje úvodzovky, je potrebné aby im predchádzal znak spätného lomítka (napr. """\""")

**NullValue** - v prípade neuvedenia hodnoty stĺpca sa medzi čiarky neuvádza nič (napr. "a","","c")

## Základná štruktúra CSV súboru

CSV súbor sa skladá z jednej alebo viacerých sekcií, ktoré sú od seba oddelené prázdnym riadkom. Každá sekcia môže mať ľubovoľný počet stĺpcov. Z pohľadu riadkov sa sekcia skladá z troch častí:

- **identifikátor sekcie a počet riadkov v údajovej časti** - 1 riadok určený na identifikáciu sekcie (napr. "hlavicka,1")
- **hlavičky stĺpcov** - 1 riadok s identifikátormi stĺpcov (napr. "ico", "rok","mesiac")
- **hodnoty stĺpcov** - 1 a viac riadkov so samotnými údajmi sekcie (napr. "12345678", "2016","12")

schéma sekcie:

identifikátor,počet riadkov				
hlavička	hlavička	hlavička	hlavička	hlavička
hodnota	hodnota	hodnota	hodnota	hodnota
hodnota	hodnota	hodnota	hodnota	hodnota

príklad sekcie (tabuľka s pevným počtom riadkov):

"suvaha-aktiva,2"				
"R"	"S1"	"S2"	"S3"	"S4"
"R1"	"100.00"	"250.00"	"0.00"	"470.00"
"R2"	"80.00"	"12.50"	"490.00"	"0.00"

## Identifikátor sekcie

Na začiatku každej sekcie musí byť uvedený jej identifikátor a počet riadkov v údajovej časti (do počtu riadkov sa nezarátava riadok s identifikátorom sekcie a hlavičkou stĺpcov). Napr. v prípade sekcie hlavicka je v prvom riadku uvedené: "hlavicka,1". Identifikátor sekcie a počet riadkov sa zapisujú ako jedna CSV hodnota (t.j. do spoločných úvodzoviek) a sú oddelené čiarkou bez medzier. Názvová konvencia identifikátora sekcie: malé písmená a separátorom je pomlčka (napr. uctovna-jednotka, suvaha-pasiva).

## Hlavičky stĺpcov

V prípade sekcie, ktorá obsahuje tabuľku s pevným počtom riadkov sa v prvom stĺpci uvádza stĺpec s indexom, ktorý má v hlavičke názov "R", v prvom riadku "R1", v druhom riadku "R2", atď. Počet riadkov indexu zodpovedá počtu riadkov v tabuľke. V ďalších stĺpcach sa uvádza písmeno S a číslo stĺpca. Napr. v prípade tabuľky s piatimi stĺpcami sa do hlavičky uvádza: "R","S1","S2","S3","S4","S5". V prípade sekcie, ktorá obsahuje tabuľku s dynamickým počtom riadkov sa niekoľko prvých stĺpcov začína spravidla malým písmenom a nasledujúce stĺpce sú číslované. Napr. v prípade tabuľky s troma stĺpcami (a, 1, 2) sa do hlavičky uvádza: "Sa","S1","S2".

## Hodnoty stĺpcov

V údajovej časti sekcií sa uvádzajú samotné dátá. Typy dátových formátov, ich rozsah, prípadne ďalšie obmedzenia sú uvedené v špecifikácii jednotlivých sekcií.

## Validácie CSV súboru

Import CSV súboru skončí neúspešne v prípadoch:

- prípona súboru je v nesprávnom formáte
- názov súboru je v nesprávnom formáte
- súbor je prázdny
- súbor má nesprávny počet sekcií
- identifikátory sekcií majú nesprávny názov
- za identifikátorom sekcie nie je uvedený počet riadkov
- za identifikátorom sekcie je uvedený nesprávny počet riadkov
- hlavičky stĺpcov majú nesprávny názov
- hlavičky stĺpcov majú nesprávny počet
- stĺpce s indexom majú nesprávny počet
- stĺpce s indexom majú nesprávne poradie
- povinná hodnota nie je vyplnená
- hodnota nemá byť vyplnená
- vyplnená hodnota nespĺňa dátový formát
- vyplnená hodnota nespĺňa stanovený rozsah
- vyplnené hodnoty v sekcií "hlavicka" nespĺňajú kritériá

## Popis dátových formátov a obmedzení CSV súboru

### Stĺpcové obmedzenia (SO)

**not-null** - pole nesmie mať hodnotu null ("a","","c")

**rovne-null** - pole musí mať hodnotu null ("a","","c")

**unique** - pole musí mať jedinečnú hodnotu v rámci riadkov sekcie

**char({max})** - textové pole s ľubovoľnými znakmi s danou maximálnou dĺžkou

**num({max})** - celé číslo s maximálnym počtom číslic

**num({precision},{scale})** - desatinné číslo s maximálnym počtom číslic pred desatinnou čiarkou (precision) a maximálnym počtom číslic za desatinnou čiarkou (scale)

**num({operator}{hodnota})** - číselné pole rovné (==), menšie (<), menšie rovné (<=), väčšie (>), väčšie rovné (>=) danej

hodnote

**date({format})** - pole s dátumom v danom formáte (yyyy - rok, MM - mesiac, dd - deň)

**regex({pattern})** - pole validované regulárnym výrazom (pattern)

**enum(hodnota1, hodnota2, ...)** - enumerácia, pole s povoleným zoznamom hodnôt

## Riadkové modifikátory (RM)

Ak sa za definíciou stĺpcového obmedzenia vyskytuje riadkový modifikátor, obmedzenie je platné len pre uvedené riadky. Riadkový modifikátor sa zapisuje ako **R[{riadky}]**

príklady RM:

R[1-8] = len pre riadky 1 až 8

R[2,6,15] = len pre riadky 2, 6 a 15

R[8++] = len pre riadky 8 a vyššie

R[1-3,7,10++] = len pre riadky 1 až 3, 7, 10 a vyššie

príklady SO s RM:

num(15) R[1-8] - celé číslo s maximálnym počtom číslic 15 ale iba na riadkoch 1 až 8

num(==null) R[9] - číslo rovné null ale iba na riadku 9

## Vypĺňanie prázdnych tabuľiek v CSV súbore

V prípade práznej tabuľky je potrebné takúto sekciu tiež uviesť do CSV súboru. Príklady vyplnenia práznej tabuľky s pevným a dynamickým počtom riadkov sú uvedené v tejto kapitole.

### Tabuľka s pevným počtom riadkov

Do hodnôt v tabuľke nie je potrebné uvádzať nuly, postačuje „null hodnota“ oddelená čiarkami:

```
"strana-aktiv,2"  
"R","S1","S2","S3","S4"  
"R1",,,  
"R2",,,
```

### Tabuľka s dynamickým počtom riadkov

V dynamickej tabuľke je možné uviesť počet riadkov 0. Ak má dynamická tabuľka aj súčtový riadok, do hodnôt v tejto sekcií nie je potrebné uvádzať nuly, postačuje „null hodnota“ oddelená čiarkami:

```
"bankove-uvery,0"  
"Sa","Sb","S1","S2","S3","S4","S5","S6","S7","S8","S9"  
  
"bankove-uvery-spolu,1"  
"S4","S5","S6","S7","S8","S9"  
,,,,"
```

**Upozornenie:** V prípade súčtového riadku práznej dynamickej tabuľky ktorý má len jeden stĺpec (napr. TAB11, KTAB24) sa do údajovej časti súčtového riadku uvádzajú znak end of line (prázdný riadok).
